INSTALLATION MASTERY: OUR APPROACH VS. THEIR APPROACH

HERE IS HOW WE DO IT

HERE IS HOW THEY DO IT

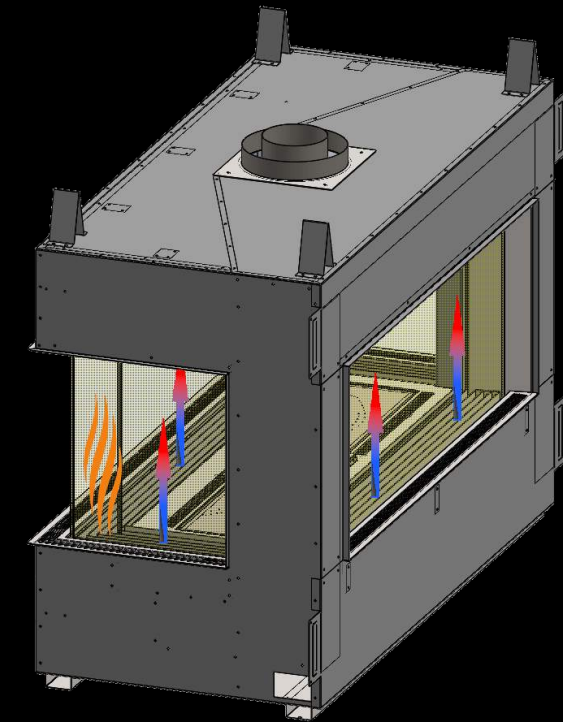

WHAT MAKE GENESIS FIREPLACES UNIQUE

Many competitors in the market approach fireplace design with a conventional methodology, necessitating additional construction expenses and time-consuming installations. Their fireplaces typically rely on a combination of air gaps, exhaust louvers, heat vents, heat dumps, and air intake louvers. Unfortunately, this traditional approach often impacts the visual aesthetics of the wall, imposing limitations on design flexibility. The extensive construction requirements not only incur extra costs but also extend the installation timeline. In contrast, our innovative design philosophy seeks to eliminate such drawbacks, offering a seamless and visually appealing fireplace solution that minimizes construction impact while maximizing efficiency and style.

- No Screen
- No Gaps in the Wall
- No Holes in the Wall
- No Louvers in the Wall
- No Extra Heat Dumps
- No Oversized Venting
- No Cement Board
- No Steel Studs

GENESIS HEAT SHIELD

- **Clear View:** With our double wall glass technology, Clear View has done away with the need for distractive safety screens. Our double shield glass protects hands from burning, while you can enjoy uncompromised views of your stunning fireplace.
- **Warm Glass System:** Safety touch glass, Warm Glass System skillfully brings the temperature of the glass down well below the stringent standard of 172 degrees Fahrenheit, while still allowing radiant heat to efficiently heat your room.
- **Easy Clean:** No technician is required with our easy maintenance glass removal system, you won't need a service technician to come and clean your fireplace viewing glass area.

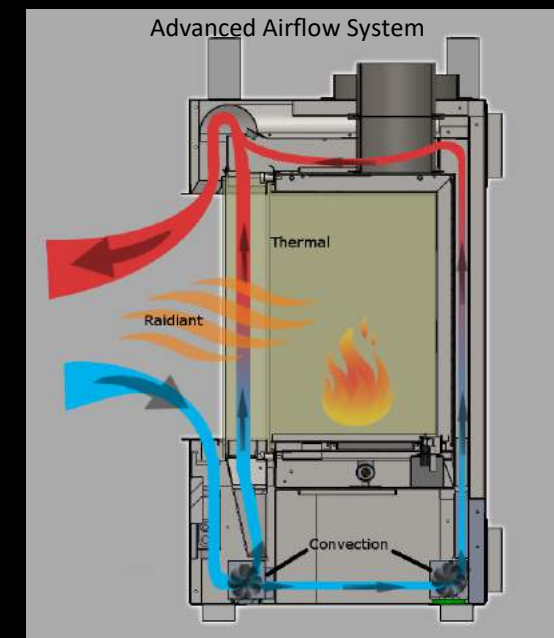

SAVANNAH'S RTC TECHNOLOGY - HEAT DISPERSAL

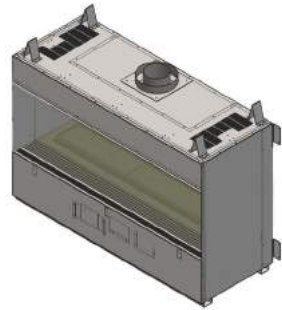

Radiant – Allowing the heat from the fire to naturally spill into the room

Thermal – Air flowing up over the radiant heat

Convection – Gently blowing air into the room

Three or four fans combine airflow with 6 variable speeds and 7 flame settings will maximize room heating efficiency on days when you might need extra heat throughout your room. An unprecedented 42 heating combinations.
